

# Weekly Report

## Research

I finally found another dataset: Wikipedia statistics, which contains everyday page view log from 2007-12 to 2011. The dataset contains all Wikipedia languages. However, the size is so large, 12G per month after compression. The total size is approximately 500G. For simplicity, we would save only English part.

Dynamic MDS is done for now. And I revised the original metric method for rank data similarity. As shown below, it follows a path, and the difference between 1994 and 1995 is amplified.

## Paper Revision

The main thing I did last week was finishing the paper writing. But still I have to practice more on paper polishing.

## Miscellaneous

1. Courseware PPT

## Work to do

1. Design, design, design.
2. Courseware PPT
